1 Overview

Mastering orders result in the making available of a book in the BoD production archive. Digital mastering orders become binding on receipt and no further confirmation is required.

Following completion of mastering and, if desired, the subsequent approval of a sample copy, the book is available without restrictions for production within the scope of the on-demand procedure.

The book can thus be ordered by the publishing house and, if included in the contractual agreement, will automatically be added to the catalogues of affiliated book wholesalers and online book retailers and/or released for orders from publishing distributors. Only the notification to the VLB (German catalogue of books in print) must, if desired, be carried out by the publishing house itself.

In addition to print data (PDF), mastering orders also include a metadata set (XML) containing the desired characteristics of the book and all key catalogue information. A number of additional services can, furthermore, be ordered directly together with the mastering order, such as, for e.g., parallel distribution as an e-book.

In order to take account of the wide range of customer requirements this handbook also describes such optional additional services separately. These elements are also optional in technical terms (XML definition):

- Mastering order including order for an advance copy
- Mastering order for multi-volume books
- Mastering order including an order for international distribution
- Mastering order including an order for e-book conversion und -distribution

Methods for ordering books are not included in this handbook. BoD offers another dedicated interface for drop shipment orders (printing order including direct shipment to end consumers including invoices), for which specifications are also available (“Drop Shipment Interface Handbook”).

For details on print data and colour management please see the “BoD File creation guide”.

2 Mastering orders

This chapter describes the XML structure of the order file. The sample data sets are followed by lists of the elements and attributes and their permitted content.

The mastering order without additional options described in Section 2.1 below represents a basic data set which is in many cases absolutely sufficient for book production using BoD.

The additional options explained separately following this can be combined and added to as desired. In the implementation of the workflow, it is thus possible to initially only realise and test the basic upload type. The desired additions can subsequently be implemented step-by-step as required.

2.1 Mastering orders without additional options

2.1.a Example

```

2.1.b Explanations

XML declaration (mandatory)

The XML declaration must correspond exactly to the form specified in the code example and, as a result, character encoding must thus follow the UTF-8 standard. All special characters can, as a matter of principle, be used in all free text elements such as the book title and blurb. It should, however, be noted that many catalogues and shops do not, as yet, fully support the UTF-8 standard. We therefore recommend limiting the character sets used to those corresponding to ISO 8859-1. Typographic attributes such as underlining, italics or bold are not possible.

Header (mandatory)

The header only contains the sender information:

- `<FromCompany>` Publishing house name (mandatory, free text)
- `<FromCompanyNumber>` BoD customer number (mandatory, integer)
The customer number is provided by BoD. If, for accounting reasons, one publishing house has different customer accounts with BoD, the correct customer account must be used for each title to ensure that the title is assigned to the correct account. In the case of deviating publishing house names, however, it is sufficient to indicate the name in the imprint element.
- `<SentDate>` Date sent using the format YYYYMMDD (mandatory)
- `<SentTime>` Time sent using the format HH:MM (mandatory)
- `<FromPerson>` Sender's name (optional, free text)
- `<FromEmail>` Sender's e-mail address (mandatory, repeatable)
The e-mail addresses given here will be used for automated feedbacks, e.g. error notifications for the print data.

MasteringOrder (mandatory)

Identifies the order as a mastering order and must contain `<Product>` once.

Product (mandatory)

Contains all the metadata for the title: as a minimum the elements stated as mandatory below.

MasteringType (mandatory)

The `<MasteringType>` element states the type of mastering order. Permissible entries are:

- `Upload` The order includes archiving of the print-ready PDF data and, insofar as agreed, the catalogue notification to distribution partners.
- `Scan` The order does not include any print data. An original copy for scanning will be provided parallel to the order.
- `AddIntlDistribution` The order only includes retrospective booking of international distribution for a book which is already available. See Section 3.1.

- **AddEBook** The order only includes retrospective booking of e-book distribution for a book which is already available, including e-book conversion. See Section 3.2.

EAN (mandatory)

Contains the ISBN-13 without hyphens or spaces.

Contributor (mandatory, repeatable)

Every mastering order must include at least one <Contributor> element. The element is repeatable, so that multiple authors, editors, or other contributors can also be named. Every <Contributor> element must/can contain:

- **<ContributorRole>** Mandatory. Possible data are:
 - **Author** (ONIX: A01)
 - **Illustrator** (ONIX: A12)
 - **Photographer** (ONIX: A13)
 - **Drawer** (ONIX: A35)
 - **Editor** (ONIX: B01)
 - **VolumeEditor** (ONIX: B13)
 - **SeriesEditor** (ONIX: B09)
 - **FoundedBy** (ONIX: B17)
 - **PrefaceBy** (ONIX: A15)
 - **ForewordBy** (ONIX: A23)
 - **IntroductionBy** (ONIX: A24)
 - **AfterwordBy** (ONIX: A19)
 - **NotesBy** (ONIX: A20)
 - **CommentariesBy** (ONIX: A21)
 - **ContributionsBy** (ONIX: A32)
 - **RevisedBy** (ONIX: B02)
 - **AdaptedBy** (ONIX: B05)
 - **TranslatedBy** (ONIX: B06)
 - **CompiledBy** (ONIX: C01)
 - **SelectedBy** (ONIX: C02)

The ONIX Code List 17 equivalents given in brackets are only intended to provide orientation, if necessary also as an aid to compiling an ONIX-based assignment table.
- **<ContributorName>** Mandatory. Full name in “Name, First Name” format. Max. 240 characters.
- **<ContributorShortBio>** Optional. Short promotional text about the author/editor. Free text, max. 4000 characters.

Title (mandatory, max. 240 characters)

Contains the book title. Free text.

SubTitle (optional, max. 240 characters)

Contains the book's subtitle, insofar as there is one. Free text.

Series (optional, max. 200 characters)

Contains, if there is one, the name of the series and the volume number. Free text.

Imprint (optional, max. 200 characters)

The customer number given in the header is automatically linked to the publishing house name. Publishing houses working with several brands can use the <Imprint> element to enter a brand name which deviates from the default setting (The imprint must be stated as the publishing house name on the book's cover and on the copyright page.) Free text.

EditionNumber (optional)

States the edition number as bibliographical information. If this element is omitted, the catalogue notification will be made based on BoD's internal edition number. Concurrence with the information given in the imprint is thus only guaranteed if the <EditionNumber> element is used. Integer.

PublicationDate (optional)

States the publication date as bibliographical information, using the YYYY, YYYYMM or YYYYMMDD date formats as options. If this element is omitted, the catalogue notification will be made on BoD's internal publication date (release for production). Concurrence with the information given in the imprint is thus only guaranteed if the <PublicationDate> element is used.

Blurb (mandatory, max. 4000 characters)

Contains the blurb or a similar short promotional text about the book. Free text.

Slogan (optional, max. 200 characters)

Short advertising slogan for the book. Can also be used as the header for the <Blurb>. Free text.

Height (mandatory)

Height of the book block in millimetres. Integer.

Width (mandatory)

Width of the book block in millimetres. Integer.

Pages (mandatory)

Number of pages of the print file independent of the pagination. For technical reasons, it must be a multiple of 4. In the case of deviations, the number of pages will automatically be increased to the next higher multiple of 4. Integer.

ColouredPages (mandatory)

States the number of coloured pages in the book. Integer.

ColouredPagesPosition (mandatory, if <ColouredPages> is greater than 0)

States the page numbers of the coloured pages separated by commas and without spaces. The page numbering in the PDF file is definitive, not the book's pagination.

Quality (optional)

Specifies the printing quality and thus determines the production price. Using this option is subject to contractual agreements. If the element is omitted, a default will be used as agreed with BoD. Permissible entries are:

- Premium Graphic-Arts quality
- Standard Book printing quality. This quality is not available for:
 - Booklets (Binding = Booklet)
 - Wire-O (Binding = WireO)
 - Hardcover with thread-sewn binding (ThreadSewn = Yes)
 - 120 g and 200 g white paper (Paper = white 120 or white200)

Paper (mandatory)

Specifies the type of paper for the book block. Permissible entries are:

- white Book paper 90 g white
- chamois Book paper 90 g chamois
- white80 Book paper 80 g white
- chamois80 Book paper 80 g chamois
- white120 Matt paper 120 g white
- white200 High gloss paper 200 g white

Binding (mandatory)

Specifies the type of binding for the book. Permissible entries are:

- PB Paperback (softcover/brochure)
- HC Hardcover (hardback/hardbound book with end papers)
- Booklet Booklet (brochure with staple binding / wire saddle-stitching)
- WireO Wire-O (brochure with twin loop / ring wire binding)

CoverDuplex (optional, only possible if binding = PB/Booklet/WireO)

Specifies if the inside covers of paperbacks, booklets or wire-o bindings should also be printed. Permissible entries are "Yes" and "No". If the inside covers should not be printed, this can also be indicated by omitting the element or not making an entry for the element.

ThreadSewn (optional, only possible if the binding = HC)

Specifies whether the hardcover binding should be thread-sewn. Permissible entries are “Yes” and “No”. If bindings should not be thread-sewn, this can also be indicated by omitting the element or not making an entry for the element.

Finish (mandatory)

Specifies the finish for the cover or dust jacket. Permissible entries are:

- `matt` Cover/Dust jacket will be matt laminated.
- `glossy` Cover/Dust jacket will be glossy laminated.
- `textured` Cover/Dust jacket will be laminated with texture.

Back (mandatory, if Binding = HC)

Specifies the shape of the book’s spine for hard covers. Permissible entries are:

- `straight` Straight spine
- `rounded` Rounded spine

Jacket (optional, only possible if binding = HC)

Specifies if a hardcover should be produced with a dust jacket. Permissible entries are “Yes” and “No”. If there should not be a dust jacket, this can also be indicated by omitting the element or not making an entry for the element.

HC_Material (mandatory, if Jacket = Yes)

Specifies the material for the lamination of the case for hard covers with a dust jacket:

- `efalin_red` Red Efallin paper
- `efalin_blue` Blue Efallin paper
- `efalin_green` Green Efallin paper
- `efalin_orange` Orange Efallin paper
- `efalin_grey` Grey Efallin paper

Language (mandatory, repeatable)

States the language in which the book is written. Permissible entries are three-letter language identifiers as per ISO 639-2, e.g. “eng” for English. Repeat for bi- or multilingual books.

Subject (mandatory)

States the title's commodity group. For children's and young people's books, the age group must be given in addition. Permissible entries are the codes of the chosen classification system. Lists of permissible codes are provided on enquiry.

- Attribute „Scheme“ in <Subject> (mandatory). Defines the classification scheme. Permissible entries are:
 - WGS Germany: commodity group as per the German Book Trade Association's new commodity group system
 - BISAC USA: BISAC Subject Headings List
 - CLIL France: Classification des thèmes CLIL

Sweden: <Subject Scheme="SBV">ABC</Subject>

- Attribute „AudienceRangeFrom“ in <Subject> (mandatory for children's and young people's books). Permissible entries are:
 - 0 Age group 0–3 years
 - 3 Age group 3–5 years
 - 5 Age group 5–8 years
 - 8 Age group 8–12 years
 - 12 Age group from 12 years

Price (mandatory, repeatable)

States the price and currency, thus requiring each of the following:

- <PriceValue> Retail price with two decimal digits, separation using a full stop
- <PriceCurrency> Three-figure currency identifier as per ISO 4217

As a general rule, based on the distribution agreement, only the euro retail price is mandatory.

2.2 Mastering orders including order for an advance copy

By using the optional <ProofDetails> element, a print approval process is added to the mastering order process, which is subject to an extra charge. Customers can order as many advance copies as required, which will be sent to the addresses indicated by the customer. Following checking of the advance copy, approval for printing is given via an email to publishers@bod.de.

2.2.a Example

The code example below only demonstrates the basic structure and the additions required for the approval process. All of the elements described in Chapter 2 remain mandatory or optional, as indicated by the ellipses.

```
<?xml version="1.0" encoding="UTF-8"?>
<BoD>
  <Header>
    [...]
  </Header>
  <MasteringOrder>
    <Product>
      <MasteringType>Upload</MasteringType>
      <ProofDetails>
        <Copies>1</Copies>
        <AddressLine1>Example Publisher</AddressLine1>
        <AddressLine2>Production department</AddressLine2>
        <AddressLine3>Ms Ann Miller</AddressLine3>
        <Street>Spring Street 2</Street>
        <ZIP>12345</ZIP>
        <City>Gardentown</City>
        <Country>GB</Country>
      </ProofDetails>
      [...]
    </Product>
  </MasteringOrder>
</BoD>
```

2.2.b Explanations

The explanations given below are limited to the additions to the basic data set described in Section 2.1.

ProofDetails (optional, repeatable)

The following elements and entries must/can be included:

- <Copies> Desired number of reference copies (mandatory, integer)
- <AddressLine1> E.g. company name (mandatory, max. 35 characters)
- <AddressLine2> E.g. full name (optional, max. 35 characters)
- <AddressLine3> E.g. extra address line (optional, max. 35 characters)
- <Street> Street and building number (mandatory, max. 30 characters)
- <ZIP> Post code (mandatory, max. 10 characters)
- <City> City (mandatory, max. 30 characters)
- <Country> Country code, two letters as per ISO 3166 (mandatory)

2.3 Mastering orders for multi-volume books

By including a number of attributes, multi-volume books can also be described comprehensively. Multi-volume books are works which have to be bound in several volumes due to the large number of pages they contain. The number of volumes is unlimited. All volumes have the same ISBN and cannot be bought singly at retail outlets. However, in order to identify the relevant volume number, the EAN-13 barcode on the cover must be supplemented with the additional EAN-2 code. Please also note the file naming conventions for the print data of multi-volume books described in Section 4.2.

2.3.a Example

The code example below only demonstrates the basic structure and the additions required for multi-volume books. All of the elements described in Chapter 2 remain mandatory or optional, as indicated by the ellipses.

```
<?xml version="1.0" encoding="UTF-8"?>
<BoD>
  <Header>
    [...]
  </Header>
  <MasteringOrder>
    <Product Type="Multivolume" Volumes="2">
      [...]
      <Pages Volume="1">870</Pages>
      <Pages Volume="2">922</Pages>
      <ColouredPages Volume="1">2</ColouredPages>
      <ColouredPages Volume="2">0</ColouredPages>
      <ColouredPagesPosition Volume="1">9,82</ColouredPagesPosition>
      [...]
    </Product>
  </MasteringOrder>
</BoD>
```

2.3.b Explanations

The explanations given below are limited to the additions to the basic data set described in Section 2.1.

Attribute Type in <Product> (optional)

The entry "Multivolume" identifies the work as a multi-volume book.

Attribute Volumes in <Product> (mandatory if Product Type = Multivolume)

States the number of volumes. Permissible entry: Integer.

Attribute Volume in <Pages> (mandatory if Product Type = Multivolume)

Assigns the stated number of pages to a volume. Permissible entry: Integer.

Attribute Volume in <ColouredPages> (mandatory if Product Type = Multivolume)

Assigns the stated number of pages to a volume. Permissible entry: Integer.

Attribute Volume in <ColouredPagesPosition> (mandatory if Product Type = Multivolume)

Assigns the stated coloured page positions to a volume. Permissible entry: Integer.

2.4 Mastering orders including an order for international distribution

Using the <InternationalDistribution> optional element with the entry “Yes” expands your mastering order to include the international distribution of a title. Your title will thus also be listed for wholesale retail in the USA, Canada, Great Britain etc. by a BoD distribution partner and, following the receipt of corresponding orders, will be printed and delivered locally. In order to facilitate this, the book will be resized in a local standard format, while retaining its original characteristics. When using this option, a retail price in US dollars must be given in addition to the euro retail price.

2.4.a Example

The code example below only demonstrates the basic structure and the additions required for international distribution. All of the elements described in Chapter 2 remain mandatory or optional, as indicated by the ellipses.

```
<?xml version="1.0" encoding="UTF-8"?>
<BoD>
  <Header>
    [...]
  </Header>
  <MasteringOrder>
    <Product>
      [...]
      <InternationalDistribution>Yes</InternationalDistribution>
      <TerritoryRestrictions>
        <Country>BR</Country>
      </TerritoryRestrictions>
      <Price>
        <PriceValue>14.80</PriceValue>
        <PriceCurrency>EUR</PriceCurrency>
      </Price>
      <Price>
        <PriceValue>18.50</PriceValue>
        <PriceCurrency>USD</PriceCurrency>
      </Price>
      <Price>
        <PriceValue>11.90</PriceValue>
        <PriceCurrency>GBP</PriceCurrency>
      </Price>
    </Product>
  </MasteringOrder>
</BoD>
```

2.4.b Explanations

The explanations given below are limited to the additions to the basic data set described in Section 2.1.

InternationalDistribution (optional)

Permissible entries are “Yes” and “No”. To exclude international distribution, the element can also be omitted or left without an entry.

TerritoryRestrictions (optional)

The following elements and entries must/can be included:

- <Country> Specifies countries which are explicitly excluded from international distribution through BoD. Permissible entry: Two-letter country code as per ISO 3166-1.

Price (mandatory, repeatable)

Specifies the price and currency. This type of order requires specification of retail prices at least in US dollars. Every <Price> element requires each of the following once:

- <PriceValue> Retail price with two decimal digits, separation using a full stop
- <PriceCurrency> Three-figure currency identifier (ISO 4217), in this case limited to:
 - USD US dollars
 - GBP British pounds

2.5 Mastering orders including an order for e-book conversion and distribution

Using the <EBook> optional element allows you to take advantage of the option of also distributing your book as an e-book parallel to the print version. You can choose to either commission BoD to carry out the e-book conversion or provide your own, completed e-book data. If required, individual countries and/or global regions can be excluded from the e-book-distribution.

2.5.a Example

The code example below only demonstrates the basic structure and the additions required for e-book distribution. All of the elements described in Chapter 2 remain mandatory or optional, as indicated by the ellipses.

```
<?xml version="1.0" encoding="UTF-8"?>
<BoD>
  <Header>
    [...]
  </Header>
  <MasteringOrder>
    <Product>
      <MasteringType>Upload</MasteringType>
      <EAN>9783833413667</EAN>
      [...]
      <EBook>
        <EAN EBookFileType="ePub">9783869361369</EAN>
        <EAN EBookFileType="ePDF">9783869361372</EAN>
        <Conversion>No</Conversion>
        <EBookFileType>ePub</EBookFileType>
        <EBookFileType>ePDF</EBookFileType>
        <Price>
          <PriceValue>10.99</PriceValue>
          <PriceCurrency>EUR</PriceCurrency>
        </Price>
        <TerritoryRestrictions>
          <Zone>Asia</Zone>
          <Country>FR</Country>
        </TerritoryRestrictions>
      </EBook>
    </Product>
  </MasteringOrder>
</BoD>
```

2.5.b Explanations

The explanations given below are limited to the additions to the basic data set described in Section 2.1.

EBook (optional)

The following elements must/can be contained in the <EBook> element:

EAN in EBook (mandatory, repeatable)

13-figure e-book ISBN without hyphens or spaces. Cannot be identical to the print EAN in <Product>. Integer. The element <EAN> can be repeated here in order to assign different e-book ISBNs to different e-book file formats. However, this distinction is necessary in one specific case only: E-books in the format ePDF need to be given their own ISBN, which may not be identical with that of any other formats of the same title.

- Attribute „EBookFileType“ in <EAN> (mandatory). Specifies the e-book file format for which the EAN is valid. Permissible entries are:
 - ePub Mandatory if an e-book file in the format ePub is uploaded, or if a conversion into this format is commissioned.
 - ePDF Mandatory if an e-book file in the format ePDF is uploaded, or if a conversion into this format is commissioned.
 - Mobi Optional. Only mandatory if the Kindle version's ISBN is different from that of the ePub version.
 - iBooks Optional. Only mandatory if the Apple version's ISBN is different from that of the ePub version.

Conversion (mandatory)

Permissible entries are “Yes” and “No”. By entering “Yes”, BoD is commissioned to carry out the e-book conversion. “No” requires the upload of at least one file in an accepted e-book format.

ConversionTarget (mandatory if Conversion = yes, repeatable)

Specifies the e-book file formats into which the source file shall be converted. Permissible entries are:

- ePub An e-book file in the format ePub is created and distributed through all available channels (Apple, Kindle, Tolino etc.).
- ePDF An e-book file in the format PDF is created and distributed through all channels accepting this format (e.g. eBook.de, Schweitzer Fachinformationen, Thalia.de).

ConversionSourceFile (optional, if Conversion = yes)

If the conversion shall be done with another file than the print files as its source, the desired source file must be indicated here. Only one entry. Permissible entries are:

- PDF An additional PDF file, which is not the print file, is provided.
- DOCX A Word Document is provided.
- INDD An inDesign file is provided.

Please also note the file naming conventions in Section 4.3a for files provided by the publisher for the e-book conversion.

EBookFileType (mandatory if Conversion = no, repeatable)

Specifies the format of the e-book file(s) which the publishing house is providing together with the mastering order. Permissible entries are:

- ePub An ePub 2.0 format file is provided.
- Mobi A Kindle-compatible file in KF8 format is provided.
- iBooks A file compiled using iBooks Author is provided.
- ePDF A PDF file is provided.

Please also note the file naming conventions for e-book data provided by publishing houses described in Section 4.3.b.

Price (mandatory, repeatable)

Specifies price and currency. A retail price in euros must always be stated. Every <Price> element requires each of the following once:

- <PriceValue> Retail price with two digits after the comma, separation using a full stop. All e-book prices must correspond to a value in the following euro price list:

	10.99	30.99	52.99	104.99	204.99
0.99	11.99	31.99	54.99	109.99	209.99
1.49	12.99	32.99	57.99	114.99	214.99
1.99	13.99	33.99	59.99	119.99	219.99
2.49	14.99	34.99	62.99	124.99	229.99
2.99	15.99	35.99	64.99	129.99	239.99
3.49	16.99	36.99	67.99	134.99	249.99
3.99	17.99	37.99	69.99	139.99	259.99
4.49	18.99	38.99	72.99	144.99	269.99
4.99	19.99	39.99	74.99	149.99	279.99
5.49	20.99	40.99	77.99	154.99	289.99
5.99	21.99	41.99	79.99	159.99	299.99
6.49	22.99	42.99	82.99	164.99	349.99
6.99	23.99	43.99	84.99	169.99	399.99
7.49	24.99	44.99	87.99	174.99	449.99
7.99	25.99	45.99	89.99	179.99	499.99
8.49	26.99	46.99	92.99	184.99	549.99
8.99	27.99	47.99	94.99	189.99	599.99
9.49	28.99	48.99	97.99	194.99	649.99
9.99	29.99	49.99	99.99	199.99	699.99

- <PriceCurrency> Three-figure currency identifier (ISO 4217), in this case limited to:
 - EUR euros

TerritoryRestrictions (optional)

Specifies countries or global regions which are explicitly excluded from e-book-distribution by BoD. The <TerritoryRestrictions> element can contain the following elements:

- <Country> Optional, repeatable. Two-letter country code as per ISO 3166-1.
- <Zone> Optional, repeatable. Possible entries are:
 - Africa
 - Asia
 - Europe
 - NorthAmerica
 - Oceania
 - SouthAmerica

3 Retrospective booking of additional options

This chapter describes the XML structure for two order files, which allow retrospective booking of international distribution and e-book-distribution for books which are already available for delivery, without having to re-send the existing print and meta data again. The scope of the data below has been reduced to the required additional information.

3.1 Retrospective order for international distribution

Using the order type “AddIntlDistribution” allows retrospective booking of international distribution as an additional option for books which are already available for delivery (see Chapter 2.4). This type of order requires specification of retail prices in US dollars and British pounds.

3.1.a Example

```
<?xml version="1.0" encoding="UTF-8"?>
<BoD>
  <Header>
    <FromCompany>Example Publishing House</FromCompany>
    <FromCompanyNumber>123456789</FromCompanyNumber>
    <SentDate>20061031</SentDate>
    <SentTime>11:26</SentTime>
    <FromPerson>First Name Surname</FromPerson>
    <FromEmail>catalogue@example.com</FromEmail>
  </Header>
  <MasteringOrder>
    <Product>
      <MasteringType>AddIntlDistribution</MasteringType>
      <EAN>9783833413667</EAN>
      <TerritoryRestrictions>
        <Country>BR</Country>
      </TerritoryRestrictions>
      <Price>
        <PriceValue>18.50</PriceValue>
        <PriceCurrency>USD</PriceCurrency>
      </Price>
      <Price>
        <PriceValue>11.90</PriceValue>
        <PriceCurrency>GBP</PriceCurrency>
      </Price>
    </Product>
  </MasteringOrder>
</BoD>
```

3.1.b Explanations

BoD, Header, MasteringOrder, Product (mandatory)

See the explanations in Section 2.1.b.

MasteringType (mandatory)

Using the entry “AddIntlDistribution” as described here identifies the order as a retrospective booking for international distribution. The permissible elements are thus limited to those described here.

EAN (mandatory)

13-figure ISBN without hyphens or spaces. Integer. Specifies a book which is already available from BoD and to which the order relates.

TerritoryRestrictions (optional)

The following elements and entries must/can be included:

- <Country> Specifies countries which are explicitly excluded from international distribution through BoD. Permissible entry: Two-letter country code as per ISO 3166-1.

Price (mandatory, repeatable)

Specifies the price and currency. This type of order requires specification of retail prices at least in US dollars. Every <Price> element requires each of the following once:

- <PriceValue> Retail price with two decimal digits, separation using a full stop
- <PriceCurrency> Three-figure currency identifier (ISO 4217), in this case limited to:
 - USD US dollars
 - GBP British pounds

3.2 Retrospective order for e-book distribution

Using the “AddEBook” order type allows retrospective booking of the e-book-distribution option as an additional option for books which are already available for delivery (see Chapter 2.5).

3.2.a Example

```
<?xml version="1.0" encoding="UTF-8"?>
<BoD>
  <Header>
    <FromCompany>Example Publishing House</FromCompany>
    <FromCompanyNumber>123456789</FromCompanyNumber>
    <SentDate>20061031</SentDate>
    <SentTime>11:26</SentTime>
    <FromPerson>First Name Surname</FromPerson>
    <FromEmail>catalogue@example.com</FromEmail>
  </Header>
  <MasteringOrder>
    <Product>
      <MasteringType>AddEBook</MasteringType>
      <EAN>9783833413667</EAN>
      <EBook>
        <EAN EBookFileType="ePub">9783869361369</EAN>
        <Conversion>No</Conversion>
        <EBookFileType>ePub</EBookFileType>
        <Price>
          <PriceValue>10.99</PriceValue>
          <PriceCurrency>EUR</PriceCurrency>
        </Price>
        <TerritoryRestrictions>
          <Zone>Asia</Zone>
          <Country>FR</Country>
        </TerritoryRestrictions>
      </EBook>
    </Product>
  </MasteringOrder>
</BoD>
```

3.2.b Explanations

BoD, Header, MasteringOrder, Product (mandatory)

See the explanations in Section 2.1.b.

MasteringType (mandatory)

Using the entry “AddEBook” identifies the order as a retrospective booking for e-book distribution. The permissible elements are thus limited to those described here.

EAN in Product (mandatory)

Specifies the print book which is already available and should now also be made available as an e-book.

EBook, EAN in EBook, Conversion, ConversionTarget, ConversionSourceFile, EBookFileType, Price, PriceValue, PriceCurrency, TerritoryRestrictions, Zone, Country

See the explanations in Section 2.5.b.

4 Data transfer and file naming conventions

Data transfer to BoD takes place via FTP. BoD provides a corresponding customer account for this purpose on request. If desired, regular download reports can also be made available in this account, for example daily reports on the books' availability status.

XML files with identical content can only be imported once. If, for example, an upload with corrected print data shall be repeated following an error notification, an alteration must be made in the XML file, for example by updating the sending date and/or time under <SentDate> and/or <SentTime>. In the case of corrections, complete data sets including all files must be transferred.

4.1 File naming conventions for standard mastering orders

For every mastering order at least three (in the case of hardcovers with dust jackets: four) files must be transferred. The "Scan" type, for which the XML file is sufficient, is an exception. All files for an order must be bundled into a ZIP archive. The ZIP container may not include any folders.

The following naming conventions apply to the ZIP archive and the files it contains. In each case *ISBN* stands for the book's ISBN-13/EAN noted without hyphens:

- ZIP container: *ISBN_MasteringOrder.zip*
- Mastering order: *ISBN_MasteringOrder.xml*
- Book block: *ISBN_Bookblock.pdf*
- Cover paperback/booklet/wire-o: *ISBN_Cover.pdf*
- Book cover hardcover: *ISBN_CoverHC.pdf*
- Dust jacket hardcover: *ISBN_Jacket.pdf*

4.2 File naming conventions for multi-volume books

In the case of mastering orders for multi-volume books, the file names for the print data (PDF files) must be expanded to include specification of the relevant volume – symbolized below as X:

- Book block: *ISBN_X_Bookblock.pdf*
- Cover paperback/booklet/wire-o: *ISBN_X_Cover.pdf*
- Book cover hardcover: *ISBN_X_CoverHC.pdf*
- Dust jacket hardcover: *ISBN_X_Jacket.pdf*

4.3 File naming conventions for e-book orders

4.3.a Conversion by BoD

If BoD is commissioned to carry out the conversion of the print data into an e-book format, no additional data need to be provided. The information provided in Section 4.1 thus also applies in this case, while in the case of a retrospective e-book booking, the transfer of the XML file is sufficient.

However, a marketing cover for the e-book can be provided as an optional extra, thus facilitating graphic optimizing to take into account the special conditions of e-book distribution. The marketing cover will be used both for the e-book itself (front page) as well as also for the display in shops. Additionally, a source file for the conversion can be provided, that differs from the print file – for example, coloured illustrations when the print is in black and white.

The following naming conventions apply, whereby *E-Book-ISBN* stands for the e-book's ISBN-13/EAN of the ePub version, noted without hyphens. However, if the only format to be distributed is ePDF, the ISBN of the ePDF version must be used here.

- | | |
|-----------------------------------|--------------------------|
| ▪ E-Book-Marketing-Cover | <i>E-Book-ISBN</i> .jpg |
| ▪ Conversion source file Word | <i>E-Book-ISBN</i> .docx |
| ▪ Conversion source file InDesign | <i>E-Book-ISBN</i> .indd |
| ▪ Conversion source file PDF | <i>E-Book-ISBN</i> .pdf |

4.3.b Provision of e-book files by the publishing house

If the publishing house provides completed e-book data, the upload of an e-book marketing cover is always mandatory.

In addition to this, for every e-book format specified in <EBookFileType>, a file with the following naming conventions must be provided. *E-Book-ISBN* must here be replaced with the ISBN of the respective e-book file format (noted without hyphens). If the formats iBooks or Mobi have no EANs of their own, the EAN of the ePub version must be entered for them as well.

- | | |
|------------------------|----------------------------|
| ▪ EBookFileType ePub | <i>E-Book-ISBN</i> .epub |
| ▪ EBookFileType Mobi | <i>E-Book-ISBN</i> .mobi |
| ▪ EBookFileType iBooks | <i>E-Book-ISBN</i> .ibooks |
| ▪ EBookFileType ePDF | <i>E-Book-ISBN</i> .pdf |

5 Changelog

Version 1.1

- Add-on: “UploadWithProofs” entry for <MasteringType> (for the ordering of reference copies with an approval process)

Version 1.2

- Add-on: <ProofDetails> element (number and shipping address for reference copies)

Version 1.3

- Add-on: <Series> element (for a series’ title)

Version 1.4

- Add-on: <Imprint> element (for deviating publishing house names)
- Add-on: “Type” and “Volumes” attributes in <Product> and “Volume” in <Pages>, <ColouredPages> and <ColouredPagesPosition> (for multi-volume books)
- Add-on: <PublicationDate> element (for statement of the actual publication date)
- Add-on: <EditionNumber> element (for statement of the actual edition)

Version 1.5

- Add-on: <InternationalDistribution> element (to order international distribution)

Version 2.0

- <Product> element in <MasteringOrder> no longer repeatable
- <Blurb> element mandatory (statement of the blurb text no longer optional)
- Omission of the <Barcode> element in <Product> (EAN barcode on the cover is taken as a given.)
- Omission of the “UploadWithProofs” entry for <MasteringType> (<ProofDetails> is sufficient.)
- <Language> in <Product> repeatable (for multi-lingual books)
- Add-on of the entries list for <ContributorRole>
- <Jacket> optional (no longer mandatory if Binding=HC)
- Add-on: <ThreadSewn> element (for hardcovers with thread binding)
- Add-on: <CoverDuplex> element (for cover inside print for paperbacks, booklets and wire-o)
- Add-on: “WireO” entry for <Binding> (additional wire-o binding type)
- Add-on: <EBook> element (for ordering of e-book distribution)
- Add-on: “AddEBook” entry for <MasteringType> (for retrospective ordering of e-book distribution, see Section 3.2)
- Add-on: “AddIntlDistribution” entry for <MasteringType> (for retrospective ordering of international distribution, see Section 3.1.)

Version 2.1

- Element <Subject_WGP> replaced by <Subject> with the new attributes „Scheme“ (to determine the classification system) und „AudienceRangeFrom“ (to indicate the readers' age group)
- Add-on: entry „PDF“ for <Type> in <EBook> (as an additional e-book format)
- Extension of the list of possible e-book prices

Version 2.2

- <EAN> in <EBook> repeatable (to provide different e-book ISBNs)
- Add-on: Attribute „EBookFileType“ in <EAN> in <EBook> (to link ISBN/e-book format)
- Add-on: Element <ConversionTarget> (to choose target formats for the e-book conversion)
- Add-on: Element <ConversionSourceFile> (allows to provide a source file for the e-book conversion different from the print PDF)
- Element <EBookFileType> replaces <Type>
- Add-on: Element <Quality> (to choose the printing quality)

Version 2.3

- Add-on: 120 g matt white paper
- Add-on: Element <TerritoryRestrictions> (to limit the scope of the international distribution)
- Update of the list of possible e-book prices
